

ARBOR SURVEY · CAPABILITY STATEMENT

HEALTH, SAFETY, QUALITY AND THE ENVIRONMENT

How we work, and what it means for you

Arbor Survey provides independent arboricultural assessment across Victoria. The way we work is built on one integrated management system covering quality, health and safety, and the environment, structured to AS/NZS ISO 45001, ISO 14001 and ISO 9001. For you, that means assessments you can rely on, delivered safely and lawfully, by people who know what they are doing.

What this means for you

 <p>Independent and defensible</p> <p>Findings that stand on the evidence and hold up in planning, at VCAT and on site.</p>	 <p>Current methods</p> <p>AS 4970:2025, AS 4373, TRAQ and QTRA, applied by people who keep their judgement current.</p>	 <p>Safe on your site</p> <p>The real risks of field work managed under documented safe work method statements.</p>
 <p>Care for the environment</p> <p>Biosecurity between sites, minimal disturbance, and advice that supports keeping trees.</p>	 <p>Compliant</p> <p>Within Victorian health and safety, environmental and planning law, kept current.</p>	 <p>Fully insured</p> <p>Professional indemnity, public liability and workers compensation. Certificates on request.</p>

One system, built to three standards

Arbor Survey runs a documented integrated management system (policies, procedures, field safe work method statements, and risk, training and compliance registers) reviewed and audited on a regular cycle. It is structured to meet the three standards below, and is being implemented toward third-party certification.

ISO 45001
Health & safety

ISO 14001
Environment

ISO 9001
Quality

What we do

Arboricultural impact assessments For planning and development, including construction impact (AIA and CIA).	Tree protection specifications and supervision Protecting trees through construction, with on-site supervision.
Tree risk assessments Defensible risk assessment using TRAQ and QTRA.	Condition and preliminary reports The health, structure and value of trees.
Root investigations Non-destructive root mapping and assessment.	Expert evidence Statements and conferences for VCAT.

Our people

Arbor Survey is led by a Principal Consulting Arborist. Our consulting arborists hold formal arboricultural qualifications and current tree risk credentials (TRAQ and QTRA), and maintain first aid and continuing professional development.

Working with you

Before we attend, we confirm scope, access and any site requirements, and we complete a pre-start risk assessment on arrival. Where we work on land you control, we provide our safe work method statements, insurances and competency evidence, and follow your site rules. Our safe work method statements and certificates of currency are available on request.
